# Precision Power Analyzers

UPDATE! AUG 2019

NEW IMPROVED VOLTAGE ATTENUATOR DESIGN

N4L

Ū

PPA4500 Series PPA5500 Series

|                                       | Product Overview   |
|---------------------------------------|--|
| Leading wideband accuracy             | Basic 0.01%(PPA5500) with class leading high frequency performance                                 |
| New Voltage Attenuator Design         | 3.3Mohm, Low burden and heat dissipation, Maintaining excellent frequency response and Linearity   |
| Wide frequency range                  | DC, 10mHz to 2MHz  |
| Fast sample rate and No-Gap           | 2.2M samples/s   |
| Leading phase accuracy                | 0.005 Degrees plus 0.01 degrees per kHz (0.003 Degrees - Transformer Edition)                      |
| Built in high precision current shunt | 10Arms, 30Arms or 50Arms with up to 1000Apk direct plus a wide range of external sensors           |
| Versatile interfaces                  | RS232, USB, LAN, GPIB as standard (PPA5500) plus direct torque and speed                           |
| Range of PC software options          | Remote control, monitoring and recording of real time data, tables and graphs                      |
| PWM Motor Drive Measurements          | Highest performance Analyzer on the market for PWM Motor Drive Evaluation                          |
| External Voltage BNC Connector        | Unique External BNC connector with high sensitivity to interface with external High Voltage Probes |
| HF + TE Accuracy                      | Increased High Frequency and Low Power factor as standard, -HF and -TE certification optional      |

# PPA5530 Precision Power Analyzer

### FRONT VIEW

### **1) POWER BUTTON**

### **② FRONT USB PORT**

USB memory port allows data or screendumps to be saved directly to a USB pen drive

### **3 DISPLAY SCREEN**

White LED backlight colour TFT display with high contrast and wide viewing angle

#### **4 SCREEN DISPLAY OPTIONS**

Zoom, Real time, Table and Graph options

### **5 MEASUREMENT FUNCTION SELECTION BUTTONS**

- POWER ANALYZER
- POWER INTEGRATOR
- HARMONIC ANALYZER
- TRUE RMS VOLTMETER and AMMETER
- IMPEDANCE METER
- OSCILLOSCOPE

Measurement Mode Quick Access Buttons

#### **6 MEASUREMENT SETTINGS BUTTONS**

Acquisition settings - Sets wiring configuration, Smoothing and data logging

Coupling - Set coupling to AC, DC or AC+DC, also set bandwidth

Range - Internal or external attenuator, autoranging settings, scale factors

Application mode - PWM, ballast, inrush current, power transformer, standby power, IEC61000 (PPA5500)

Plus direct configuration of - Alarm, Auxiliary, Remote, System and Program functions

### 7 MENU SELECTION AND CURSOR CONTROL

### **8 START, STOP, ZERO AND TRIGGER**

Trigger button refreshes measurement, Zero resets datalog or allows an offset trim Start and Stop buttons provide manual control of a measurement period

### **REAR VIEW**

PPA45/5530 (3 Phase)

### 9 PHASE INPUTS

Direct voltage Input: 3kVpk (1kVrms) in 9 ranges\*

Direct current Input: 300Apk (30Arms) Standard Model, 30Apk (10Arms) Low Current

Model, 1000Apk (50Arms) High Current Model

External voltage and current sensor inputs to 3Vpk in 9 ranges\* - BNC Connector

#### **10 SYNC CONNECTOR**

All PPA models can offer up to 12 phase analysis using the PPALoG PC program Additionally two PPA45/5530's can be connected via the extension port and sync BNC connector to form a 6 phase analyzer when a PC is not available

### **11 EXTERNAL SENSOR INPUTS**

+/-10V or pulsed input from torque and speed sensors provides direct measurement of mechanical power + analogue output

### 12 PC INTERFACE CONNECTIONS

Standard interfaces RS232 + USB + LAN + GPIB (Standard on PPA5500, GPIB optional on PPA4500)

### **13 LOW NOISE COOLING FANS**

Air bearing low noise fans are utilized to ensure minimum audible and electrical noise while maintaining a stable operating temperature for the high precision low inductance internal current shunts

\*PPA4500 - 8 ranges

## ■ High Speed Power Measurement - 2ms\* Datalog Interval PPA5500 PPA4500

Measurements include all frequency components in power waveforms for example, fundamental, harmonics of the fundamental and the carrier of a PWM inverter output by maintaining 2.2Ms/s sampling at any drive frequency \*\*PPA4500 10ms datalog interval

## 2MHz Wideband Frequency Response PPA5500 PPA4500

With 2MHz bandwidth and exceptionally flat response, the PPA provides precision analysis of total power in applications such as lighting ballasts or PWM drives that involve a wide range of frequency components. Proprietary to N4L, a digital process called Expanded Nyquist Sampling ensures no alias components

## High Accuracy PPA5500 PPA4500

Unique voltage and current analogue card design ensures high accuracy for both power and harmonic analysis

## ■ DFT Real Time No Gap Analysis PPA5500 PPA4500

Many power applications have fast changing asynchronous current pulses which are not suited to fixed data length FFT analysis. The PPA series combine a real time DFT (Discrete Fourier Transform) technique with variable window no gap analysis to ensure the optimum speed and accuracy at all times

- Missing data compromises power accuracy
- Long term measurement integration achieves approximately correct average power
- Real Time No Gap analysis ensures correct power measurement
- Simultaneous fundamental and pulse frequency synchronization quickly obtains the correct power

## ■ Up to 6 Phase Analysis PPA5500 PPA4500

Master/Slave mode enables two PPA45/5530's to be fully synchronized into a single 6 phase measurement system \*\*4 or more phase measurements provided via N4L PC software or master slave mode

## Advantages of Dual PPA vs Single instrument

- Twice the processing power as one unit
- · Flexibility between different applications
- Units fully synchronized giving single point of control

#### Measurement parameter examples

- Input/Output power measurement
- · Efficiency of the inverter
- Inverter output voltage harmonics
- · Motor drive characteristics

## ■ Input Torque and Speed Sensor PPA5500 PPA4500

Direct measurement of torque and speed from dedicated inputs that are fully synchronized with the voltage and current channels permits true real time power conversion efficiency to be evaluated

①TORQUE Bipolar±10V / pulsed ②SPEED Bipolar±10V / pulsed ③ANALOGUE Analogue output of selected function ±10V

Real time data

## ■ Built in Amplifier and Unique Shunt Resistor PPA5500 PPA4500

The PPA series use a single shunt resistor unique to N4L that combines exceptional linearity and no need for relay switching which can cause measurement errors

| Model       | Low Current Model                 | Standard Model                      | High Current Model                   |
|-------------|-----------------------------------|-------------------------------------|--------------------------------------|
| PPA5500     | 9 ranges: 3mApk - 30Apk (10Arms)  | 9 ranges: 30mApk - 300Apk (30Arms)  | 9 ranges: 100mApk - 1000Apk (50Arms) |
| 100mΩ Shunt |                                   | $10 \mathrm{m}\Omega$ Shunt         | 3 mΩ Shunt                           |
| PPA4500     | 8 ranges: 10mApk - 30Apk (10Arms) | 8 ranges: 100mApk - 300Apk (30Arms) | 8 ranges: 300mApk - 1000Apk (30Arms) |
| PPA4500     | 100mΩ Shunt                       | 10mΩ Shunt                          | 3mΩ Shunt                            |

### External shunt options

(DC ~ 1MHz, 0.1% Accuracy, Inductance<1nH)

| Model | Maximun | n Current | Bandwidth      |  |
|-------|---------|-----------|----------------|--|
| Model | Rated A | Peak      | Danawiath      |  |
| HF500 | 500Arms | 5000Apk   |                |  |
| HF200 | 200Arms | 2000Apk   |                |  |

All power measurement and RMS values are computed simultaneously allowing measured values to be selected and viewed during analysis

Here, three phase total power is selected with all primary power functions in each phase plus frequency, a selected harmonic, dc watts and phase to phase voltage

Mechanical power, Maths and Efficiency functions can also be added to this screen giving real time analysis of electrical or electrical to mechanical systems

3 Phase analysis display selectable in both Total and Fundamental values

### MEMORY

Large 1GB (PPA5500 series) internal memory, data logging from 2ms intervals with synchronization to the fundamental frequency and no gap between measurements

Datapoint storage up to 10M in the PPA5500 series

Alternatively the data can be stored in an external USB pen drive or directly to PPALoG PC software

Voltage, Current, Frequency and Power - Examples of graph mode

Oscillosope - Voltage and Current display

Three phase display of voltage or current

Oscillosope Cursors - Enable cursors and display Vrms, Vpk, Watts, Power Factor, Arms and Apk

### Note

In Harmonic Analyzer Mode, the PPA4500 provides up to 100 Harmonics with real time, table or bar graph presentation. Measurements are in absolute magnitude and percentage of fundamental with harmonic phase also available. The PPA5500 extends the harmonic range to 417 for aerospace applications and also includes a DFT based interharmonic analysis mode for aircraft standards testing (TVF105)

## **ACQUISITION SETTINGS**

## ■ Auto-Ranging, Range Up Only or Manual PPA5500 PPA4500

Range modes are selectable

①Auto-Ranging Performs automatic switching of voltage and current ranges up and down depending on the level of

the measured value with all inputs linked or ranged independently to ensure optimum accuracy

②Range up only Performs automatic ranging when the input is 120% of range, ranging up only

3Manual No automatic ranging, user specifies the range in which to operate

(used when input voltages and currents are known) or during inrush current testing

## ■ Independently Set Input Coupling PPA5500 PPA4500

Independently set input coupling so different methods of sensing can be implemented. Such as a CT on phase 1 and shunt sensing on phases 2+3

Wiring Settings PPA5500 PPA4500

Various wiring arrangement settings to satisfy a complete range of setups found in power analysis

## **ACQUISITION SETTINGS**

## ■ Bandwidth Settings PPA5500 PPA4500

DC(DC-5Hz) DC measurements up to 5Hz

Low(DC-200kHz) Basic power (50/60Hz) including harmonics of the

fundamental while rejecting high frequency noise

Wide(DC-2MHz) Wideband applications such as PWM inverter drives

including all power components for true total power

Example of independent wiring configuration showing 3 phase individual coupling settings

Note

The PPA45/5500 series includes a programmable digital filter that allows users to set a preferred bandwidth

## ■ Display Settings, Smoothing Response and Frequency Reference PPA5500 PPA4500

### ①Display update rate

Various settings for the display update rate (2ms  $\sim$  100s) which also increases the smoothing when used together with the smoothing option. A 'window' option permits direct control of the measurement window size (Note: Minimum window size for PPA4500 - 10ms)

Example of setting the window, eg (50Hz set to 20ms)

### 2Smoothing settings

Working in conjunction with the speed setting, a smoothing filter can then be applied to the measurements. Normal and slow options are available which apply an increasing time constant to the output of the measurement window

| speed  | update<br>rate                        | normal<br>time<br>constant          | slow time<br>constant             |
|--|---------------------------------------|-------------------------------------|-----------------------------------|

- · Display update speed settings
- $\cdot \ \mathsf{Setting} \ \mathsf{the} \ \mathsf{filter} \ \mathsf{(normal/slow)}$

## Frequency Reference PPA5500 PPA4500

When making a precision measurement of ac power, correct synchronization with the fundamental frequency is essential. The PPA series provides a solution to frequency synchronization in a wide range of applications including Standby Power, Variable Speed Drives, Electronic Ballasts and DC to AC Inverters with the option to select voltage, current, speed or ac line input as the frequency reference. The PPA45/5500 series also provide fully independent frequency detection an all phase inputs

Real time data

## **APPLICATIONS**

### PWM Motor Drive Evaluation PPA5500 PPA4500

The PPA5500 is the perfect solution for Inverter Drive evaluation and analysis. Utilising proprietary digital filtering algorithms, the N4L power analyzer range offers unrivalled performance. The PPA5500 can be used in conjunction with external current sensors such as the WR5000 - a 1MHz 5000A Rogowski Coil in high current applications. Inverter efficiency is available via either 3 Phase 2 Wattmeter method + CH3 (utilising CH3 for the DC Bus measurement). Alternatively a second single phase PPA can be connected to the DC Bus and the two analyzers are configured in a Master Slave arrangement, all data is available via N4L Software.

## ■ High Speed Analysis PPA5500

The PPA5500 features the fastest signal processing on the market, this enables high speed tracking of changing inverter drive frequencies and power parameters during ramp up and ramp down conditions, for example in electric vehicle applications. N4L's free to download software package (PPALoG) offers datalog intervals down to 5ms, providing fast, no-gap real-time data direct to software.

## **APPLICATIONS**

### ■ Standby Power (IEC62301 Ed 2.0) PPA5500 PPA4500

The PPA4520 and PPA5520 units offer unrivalled dynamic range which enables the user to comply with IEC62301 and Energy Star testing standards. Utilising "Standby Power Mode" the PPA employs proprietary standby power signal processing algorithms to provide accurate no gap analysis of high crest factor (CF) signals, importantly the entire N4L power analyzer range benefit from a guaranteed accuracy specification up to a crest factor of 20.

### ■ Guaranteed Accuracy up to Crest Factor 20 PPA5500 PPA4500

As stated in IEC62301, typical standby power current waveform crest factors can exceed values of 10. In such cases it is important for the Power Analyzer to guarantee accuracy at crest factors expected of the application under test.

Newtons4th are the only Power Analyzer Manufacturer in the world\* to provide ISO17025 calibration certficates on all new Power Anlayzers as standard. Our ISO17025 Schedule of Accredition includes Voltage, Current, Phase, Power, Harmonics and Flicker. With traceable certification of power accuracy down to 0.5W, N4L offer the ideal measurement solution for certified standby power measurement.

### LED Driver Efficiency PPA5500 PPA4500

The PPA4520 and PPA5520 offer an ideal solution for LED driver efficiency measurements, dimming techniques such as reverse phase control are easily analyzed by the N4L Power Analyzers.

Efficiency can be viewed either directly on the PPA display using the "Phase/Next Phase" efficiency option or calculated in PPALoG software.

13

### Power Transformer Loss Testing PPA5500 PPA5500-TE Transformer Edition

Both the PPA4500 and PPA5500 series Power Analyzers incorporate a unique analogue input design and proprietary digital signal processing techniques that exhibit a market leading standard phase accuracy of 0.005°. This inherent phase accuracy is optimised further within the new PPA5500-Transformer Edition to provide an ideal transformer core loss testing solution in accordance with the IEC60076-8 standard. See our separate PPA5500-TE brochure for full specification details including UKAS ISO17025 accredited certification and extended calibration interval.

### ■ Aircraft Avionics Industry - 417 Harmonics + Interharmonics PPA5500

The PPA5500, featuring high speed FPGA and DSP processors is able to compute up to 417 Harmonics and also meet interharmonic measurement requirements of ABD0100.1.8. The Harmonic Analyzer mode and special TTVF105 Interharmonic mode in the PPA5500 offer the Avionics Engineer an accurate, simple to use solution.

Example ABD0100.1.8 Interharmonic Results, up to 150kHz (Sample Waveform analyzed for illustration)

Note: PPA4500 up to 100 Harmonics

### Solar Inverter Performance Analysis PPA5500 PPA4500

The PPA5500 and PPA4500 provide a highly accurate solar inverter analysis and evaluation solution, featuring independant frequency detection N4L Power Analyzers exhibit the ability to synchronise to the 50/60Hz output signal along with with the DC input signal from the solar array. Both efficiency of the inverter, quality of the AC output and many other performance parameters can be recorded.

### Inrush Current PPA5500 PPA4500

Accurate inrush current measurements rely upon two factors aside from fundamental measurement accuracy, these are gapless measurement and a high sampling rate;

- 1. Gapless Measurement Inrush waveforms by their nature are transient; gapless measurement is vitally important in order to ensure that inrush waveform data is not missed.
- 2. High Sampling Rate When working with mains frequencies, many power analyzers have low sample rates due to the computation of measured values from a data block of finite size. The PPA4500 and PPA5500 utilise a proprietary real time signal processing technique that maintains full 2.2Ms/s sample rate irrespective of the measured load frequency, ensuring that high frequency events are captured without aliasing.

Example Inrush current data, datalogging at nominally 20ms intervals directly to PPALoG

## Calibration and ISO17025 Certification

## UKAS PPA5500 PPA4500

Newtons4th are an accredited UKAS Calibration laboratory, all PPA4500 and PPA5500 Power Analyzers are supplied with an ISO17025 UKAS Calibration Certificate as standard. Calibration of N4L Power Analyzers is an integral and important part of our service to our clients, we offer quick turnaround times at a competitive price. Re-Calibration is also available at our international offices and various distributors throughout the world\*.

7949

### Schedule of Accreditation PPA5500 PPA4500

N4L's schedule of accreditation to ISO17025 is wide ranging and an overview of the schedule is detailed below, for more specific information, please see the UKAS website to view the full accreditation schedule.

|  | ISO17025 UKAS Accreditation Schedule           |                 |
|--|--|-----------------|
|  | Signal Amplitude                               | Frequency Range |
| Voltage Sine Amplitude                     | 1V to 1008V                                    | 16Hz to 850Hz   |
| Voltage Harmonic Amplitude                 | 0V to 302V                                     | 16Hz to 6kHz    |
| Current Sinewave Amplitude                 | 100mA to 48A                                   | 16Hz to 850Hz   |
| Current Harmonic Amplitude                 | 0A to 15A                                      | 16Hz to 6kHz    |
| Current to Voltage Phase Angle             | -180° to +180°                                 | 16Hz to 850Hz   |
| Apparent Power (VA Product)                | 100mVa to 48.4kVA                              | 16Hz to 850Hz   |
| AC Power                                   | 0W to 48.4kW                                   | 16Hz to 850Hz   |
| AC Power - Calorimetry [New for 2017]      | 1W to 5W                                       | 45Hz to 2MHz    |
| Current Harmonic Amplitude to IEC61000-4-7 | 0A to 6A                                       | 16Hz to 6kHz    |
|  | Pinst(Sinusoidal Modulation)                   |                 |
|  | Pinst(Rectangular Modulation)                  |                 |
|  | Pst  |                 |
|  | Frequency Changes                              |                 |
| Flicker to IEC61000-4-15                   | Distorted Voltage with Multiple Zero Crossings | As per IEC61000 |
|  | Harmonics with Sidebands                       |                 |
|  | Phase Jumps                                    |                 |
|  | Rectangular Changes with Duty Cycle            |                 |
|  | d(t)   |                 |
| IEC61000-4-15 Impedance Networks           | Resistance, Reactance                          | 33 mΩ to 400 Ω  |

### Additional Calibration Options - IEC61000 / TE / HF PPA5500

By including with every PPA45/55 instrument both our 2MHz\*\* wideband calibration detailed below and also ISO17025 accredited calibration, N4L assure compliance with our complete specification including the enhanced detail associated with IEC61000, TE and HF specifications. For those who require separate ISO17025 accredited certification of Harmonics, Flicker, Low PF Phase or High Frequency Power accuracy, these are avalable as calibration options.

Due to the specialist nature of Power Measurement Instrumentation Calibration, N4L utilise both commercially available calibration equipment (such as the Fluke 6105A for UKAS Certification) along with N4L bespoke designed signal generation equipment in order to calibrate our instruments over the full frequency range (up to 2MHz). Calibration over the full frequency range is uncommon given that such signal generation equipment is not commercially available. When supplied with an N4L analyzer, all customers will receive a calibration certificate covering the complete frequency range.

<sup>\*</sup> UKAS Calibration is available from N4L UK HQ only, details for calibration performed at other locations is subject to local accreditation, please contact your local office for more details.

<sup>\*\* 1</sup>MHz for 50A versions

## Ranging Principles

## ■ 9 Stage Solid State Ranging System - PPA5500 PPA4500

Combining highly linear voltage attenuator and current shunt designs with a proprietary 9 stage (PPA5500) or 8 stage (PPA4500) solid state ranging system on every phase input, the PPA series achieve a uniquely wide dynamic range, with no need to switch between voltage attenuators or current shunts when ranging up or down.

### Design features:

Single attenuator on each voltage input
High impedance low capacitance
Single shunt on each current input
Low impedance low inductance
Auto peak detect
High speed solid state ranging
High Noise rejection
Auto DC offset trimming

### Benefits:

Overload protected on any range
Low shunt affect on voltage connections
Low voltage burden on current connections
Market leading phase accuracy
Peak detect ranging ensures no signal clipping
Low attenuator/shunt operating temparature
Fast range switching
Constant frequency response on all ranges
Signal can be applied with instrument powered off

## Auto Peak Ranging Ensures Complete Waveform Analysis PPA5500 PPA4500

It is often overlooked that for an instrument to correctly calculate power parameters, the entire waveform must be digitised for analysis. The Peak Ranging system employed by all N4L Power Analyzers ensures that the entire waveform is digitised and the correct power parameters are calculated.

Example RMS Ranging system, commonly used in older instrument designs

Waveform within red hashed area is clipped by an RMS ranging system and fixed crest factor setting

Modern Peak Ranging System, implemented on all N4L Power Analyzers

Peak Ranging system auto-detects the peak of the input signal and selects the ideal range

### Note

An RMS Ranging system requires the user to have prior knowledge of the crest factor which in many applications is not practical, either because the user cannot reasonably be expected to know this value before a measurement, or because the crest factor is changing during a measurement period. The ideal ranging system is therefore based upon peak detection which does not require the user to be concerned with a crest factor setting. While many RMS ranging systems are only guaranteed to support a Crest Factor of 6, all N4L Power Analyzers guarantee to auto-range with any crest factor and maintain full accuracy with a CF of at least 20.

While waveforms with a true CF above 20 are very unusual, 'auto range up' or 'manual' ranging combined with a market leading range sensitivity enables the PPA to achieve a dynamic range equal to a CF > 300.

## PC CONTROL AND DATA ACQUISITION

### PC Software PPA5500 PPA4500

Analysis carried out by the instrument can easily be transferred to a PC via USB, RS232 or LAN

① **PPALoG** Exceptional flexibility and ease of use with all the functions included in the original PPAcomm program plus multiple instrument control for 4-12 phase applications and data export to Text file, Excel, Bitmap or Clipboard

### Data Export options

② **PPA Standby Power** Full compliance testing to IEC62301. Meets or exceeds the requirements and methodology of U.S. EPA (Energy Star), U.S.DOE, California Energy Commission (CEC), among others.

On completion of the standby test, a full test report can be exported directly to a spreadsheet

## PC CONTROL AND DATA ACQUISITION

## ■ Fully Compliant IEC61000-3-2/3-3 Harmonics and Flicker Testing PPA5500

The PPA55xx series Power Analyzers provide fully compliant ISO17025 certified Harmonics and Flicker testing, Newtons4th provide fully integrated software featuring real time and graphical user interfaces as well as excel and pdf exporting functionality.

Flicker tests are automatically evaluated against the IEC/BSEN or JIS limits and a pdf/excel report is generated indicated PASS/FAIL.

Both graphical and real time displays are available when testing to IEC61000-3-2/3/11/12. The graphs are colour coded to assist the test

More information is available in a separate IEC61000 Harmonics and Flicker brochure. Dedicated models called the PPA5511 and PPA5531 include low impedance shunts (see \*\* on page 20) and adjusted filter response for full compliance testing.

### ■ Connection Interface PPA5500 PPA4500

RS232 (standard), USB (standard), LAN (standard on PPA5500), GPIB (standard on PPA5500)

## ■ Data Logging PPA5500 PPA4500

Utilizing sophisticated frequency detection techniques, synchronization with the fundamental AC waveform is automatically achieved. Datalog intervals can be set from 2ms with measurements saved to a PC or internal memory.

Option

Standard

All specifications at  $23^{\circ}\text{C} \pm 5^{\circ}\text{C}$ . These specifications are quoted in good faith but Newtons4th Ltd reserves the right to amend any specification at any time without notice

The N4L product range also includes Frequency Response and Impedance Analyzers, Selective Level Meters and Laboratory Power

PSM17xx  $10\mu Hz\sim 35MHz$ 

#### **Applications**

## Newtons4th Ltd N4L

- Power supply phase margin and gain margin (FRA)
- Inductance, Capacitance and Resistance (LCR)
- Analysis of mechanical vibration (HARM)
- Phase Angle Voltmeter (PAV)

Contact your local N4L Distributor for further details

#### Newtons4th

Newtons4th Ltd (abbreviated to N4L) was established in 1997 to design, manufacture and support innovative electronic equipment to a world-wide market, specialising in sophisticated test equipment particularly related to phase measurement. The company was founded on the principle of using the latest technology and sophisticated analysis techniques in order to provide our customers with accurate, easy to use instruments at a lower price than has been traditionally associated with these types of measurements. Flexibility in our products and an attitude to providing the solutions that our customers really want has allowed us to develop many innovative functions in our ever increasing product range.

Newtons4th Ltd are ISO9001 registered, the internationally recognised standard for the quality management of businesses

THE QUEEN'S AWARDS FOR ENTERPRISE: INNOVATION

In recognition of the technical innovation and commercial success of the PPA series, N4L received the "Innovation 2010" Queen's award for enterprise
