Wireless & Network Temperature Sensors that Log Data with Alarm Notification via Cellphone or Email.

Industries & Applications:

- Real time Facilities and Bio Freezers Remote monitoring
- Life Sciences - vaccine, blood, drug shipment monitors
- Food Safety - HACCP cold chain validation during shipment
- FDA - 21 CFR compliant data base software
- Low cost portable temperature loggers during power outages for back up validations

what's new?

Marathon Products Loggers & Software Meet New FDA Guidelines for Centralized Monitoring.

Marathon Products networked loggers with LoggerPulse Enterprise software are a perfect solution to meet the new FDA Guidelines for Centralized Monitoring of sites across the state, across the country or around the world. Access your location information from anywhere via an internet connection using PCs and smartphones.

Visit Marathon´s Wireless Product Line and LoggerPulse Cloud Based Software for more information or call 800-858-6872 x607.

Eight of the top 10 hospitals use Marathon Products data loggers.

US News & World Report just published their annual

Best Hospitals 2013-14: Overview and Honor Roll

Rank	Hospital	Points Marathon
1	Johns Hopkins Hospital, Baltimore MD	30
2	Massachusetts General Hospital, Boston MA	29
3	Mayo Clinic, Rochester MI	29
4	Cleveland Hospital, Cleveland IL	27
5	UCLA Medical Center, Los Angeles CA	19
6	Nothwestern Memorial Hospital, Chicago IL	17
7	New York-Presbyterian University Hospital NY	17
8	UCSF Medical Center, San Francisco CA	17
9	Brigham and Women's Hospital, Boston MA	16
10	UPMC-University of Pittsburgh Medical Center, PA	15

USGS buys additional EDL-M5 RF Loggers for Yellowstone Volcano Observatory (YVO).

This purchase is in addition to the 10 loggers they are already using. Marathon's EDL-M5 Loggers have been reliably running for almost 3 years, unattended, recording temperatures every 2 minutes.

Daily data is downloaded from a remote Ranger Station across the internet and posted on the YVO website. The data is also made available for download to scientists around the world. **Read more.**

Coming Soon, the EDL-8 WiFi - Marathon's new 8-channel wireless & Ethernet data logger.

Accurate, precise Data Capture with Alarm notifications by email or text. Large easy-to-read LCD display. View realtime or historic high/low data per channel online. User-programmable logger with 1 MB of data memory.

Types of NIST-traceable sensors: Temperature Sensor; Relative Humidity Sensor; CO2 Sensor.

CLICK HERE to see the Maxi-Thermal WiFi software highlights.

Introducing two new dual-sensor temperature data loggers!

The **EDL-LN2** has one sensor for ambient temperatures, and one external probe that monitors cryogenic temperatures from -200°C (-328°F) to +72°C (+162°F).

CLICK HERE to see the EDL-LN2 Maxi-Thermal software highlights.

The **EDL-RTD2** has one sensor for ambient temperatures, and one external probe that monitors high temperatures from -29°C (-20°F) up to +380°C (+716°F).

CLICK HERE to see the EDL-RTD2 Maxi-Thermal software highlights.

Now four Marathon temperature data loggers have USB connectivity!

The **2C\TEMP-RH** is a digital temperature and humidity recorder with a temperature range of -29°C to +72°C

LOGGER PULSE™

Introducing Marathon LoggerPulse Enterprise Software!

Our enterprise software is the ideal cold chain solution for managing and analyzing data from multiple data loggers from multiple locations.

NO LIMITS – Any location. Any time. Any users.

Earth Magazine Cover Story, May 2011

New technologies track Yellowstone's feverish supervolcano in real time.

The new system will allow managers, scientists and the public to keep track of changes to the hydrothermal system. Advantages include, data that can be viewed within 24 hours of measurement, allowing rapid assessment of changing conditions. Equipment malfunctions can be rapidly detected, enabling us to identify and correct any problems. And, if needed, we can ping the equipment to get the most recent data, rather than waiting for it to alert us to any changes.
